► The Basque Country: A Growing Industrial Reality

1.

The Basque country provides the perfect natural and industrial setting for the development of the Automotive Industry. With an industrial history that goes back more than 300 years, the Basque Country boasts some of the most prestigious educational institutions in Spain, producing large numbers of well-trained professionals. Its geographical location and modern communications infrastructures facilitate the necessary mobility of materials and people. Moreover, its large number of support institutions promote R&D activities and facilitate the diffusion of new technologies.

Located in the north-eastern corner of the Iberian Peninsula and one of the largest industrial areas in Spain, the Basque Country is known for its ability to adapt to the continuous changes associated with the development of an advanced

society and for **the conditions, attitudes and aptitudes** required to develop a highly active and competitive Automotive Industry.

Strategic Location

The Basque Country, one of the major geographical communications centres located along Europe's Atlantic seaboard, has several seaports, national and international airports, a large, well-connected railway network and first-rate motorways and roads.

In addition, the logistics centres of the Port of Bilbao and Vitoria airport cater for goods being transported to and from major international destinations.

Industrial Fabric and Subcontracting

The Basque Country has a long industrial history that began with the dawning of the iron and steel industry, eventually led to the creation of major industries such as shipbuilding and heavy engineering, and more recently has evolved towards today's most advanced technologies. The widely-recognised industriousness of the Basque people has given rise to a highly-specialised network of small and medium-sized companies, providing a wealth of subcontracting and outsourcing possibilities.

International Commitment

Basque companies are extremely active internationally with facilities and/or strategic alliances in a large number of countries throughout the world, especially in the other member states of the European Community, Latin America and the Far East.

Administrative Structure

As an Autonomous Community, the Basque Country enjoys a wide range of administrative powers including: industrial policy, education and public investment. Local authorities have a long record of providing companies with strong institutional support to facilitate the launch of new business projects, develop new technological products and companies,

and attract new business to the region. "Sociedad para la Promoción y la Reconversión Industrial, S.A." (SPRI - Association for the Promotion of Industry) is the official development agency for the Basque Country. Its main undertakings include promoting the Basque Country as an attractive location for inward investment and forging business relations between foreign and Basque companies. Over the last 20 years, SPRI has accumulated a great deal of experience in this field and its advanced system of industrial promotion has provided public and private financial support for a wide variety of activities.

The Basque Public Administration has created a number of entities that provide basic support for industry in areas such as: Management Quality (Euskalit), the Environment (Ihobe), Technology (Eite), etc. This is the main reason why the Basque Country has one of the highest densities of ISO 9000 certificates in Europe and a larger rate of implementation of the EFQM European excellence model. There is also a high level of awareness of environmental issues, which contributes to reducing environmental impact and helps to ensure quality surroundings, in spite of the high degree of industrialisation.

The Basque Country boasts one of the best public health services in Spain, Osakidetza, as well as one of the most modern and automated public administrations, which pays special attention to the development of electronic government, for which it has developed a special programme.

Training Infrastructure

The Basque Country has 4 prestigious universities with more than 91,000 students and 4000 lecturers. Of all the technical areas offered, Industrial Engineering attracts the largest number of students and has been taught for more than 100 years. The Bilbao and San Sebastian Schools of Engineering are among the most highly accredited in Spain, with a history, in the case of the Bilbao School, that dates back more than a century.

R&D Infrastructure

The Basque Science, Technology and Innovation Network (SARETEK) is made up of over 70 institutions including: 10 Technology Centres of international renown, university research departments, 4 research laboratories, 4 sector centres and 2 public research organisations, as well as corporate R&D units and innovation organisations that serve as intermediaries between business and universities – one of the highest concentrations in Europe of research and development activities as a support for industry.

Industrial and Economic Infrastructure

The Basque Country has an extensive network of structures that provide support for a number of different industrial sectors. The Basque Network of Business Parks includes three large Technology Parks (Bilbao, San Sebastián and Vitoria), among which the Technology Park of Zamudio is of

special interest as it was the first to be created in Spain. Due to their constant efforts to promote the companies in their respective sectors, and to provide incentives and advice, the network of Sector Associations of the Basque Country represents a major source of support for more than 1000 associated companies, articulating an efficient system of industrial development based on collaboration.

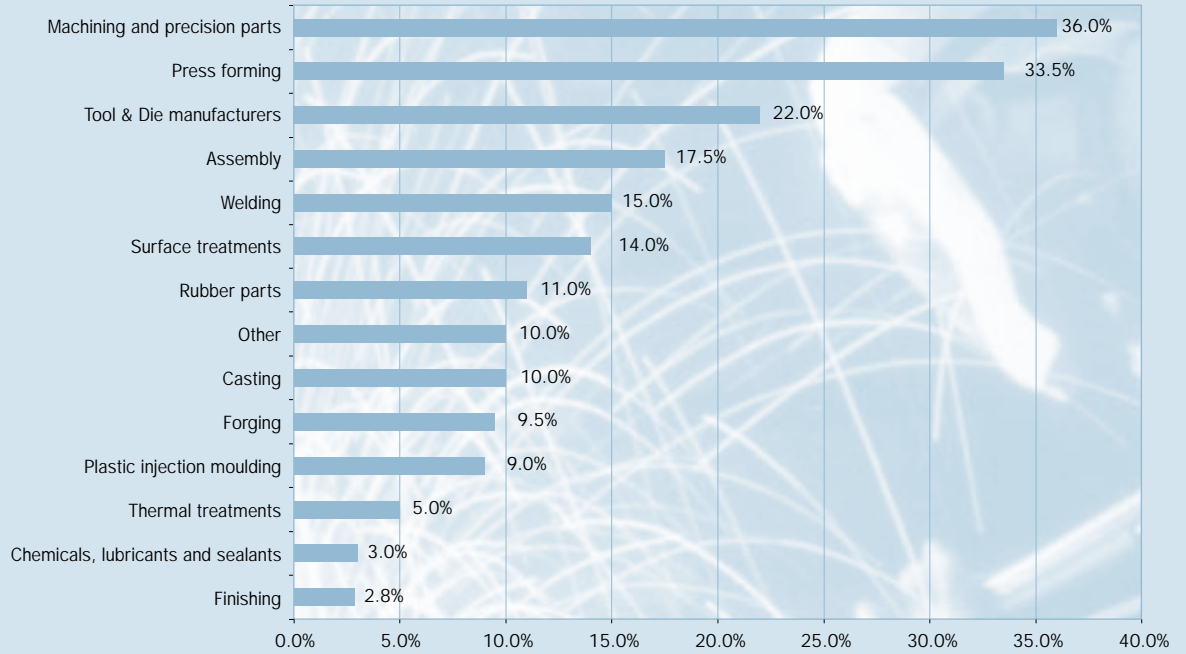

All these centres and most of the Basque Country have access to broadband telecommunications networks, provided by two main operators and a large number of Internet service providers (ISP).

The Basque financial system is well known for its capacity and influence, and has produced international entities such as BBVA, the Savings Banks Confederation, the Cooperative System, etc. All major international financial institutions have a presence in the Basque Country.

Quality of Life

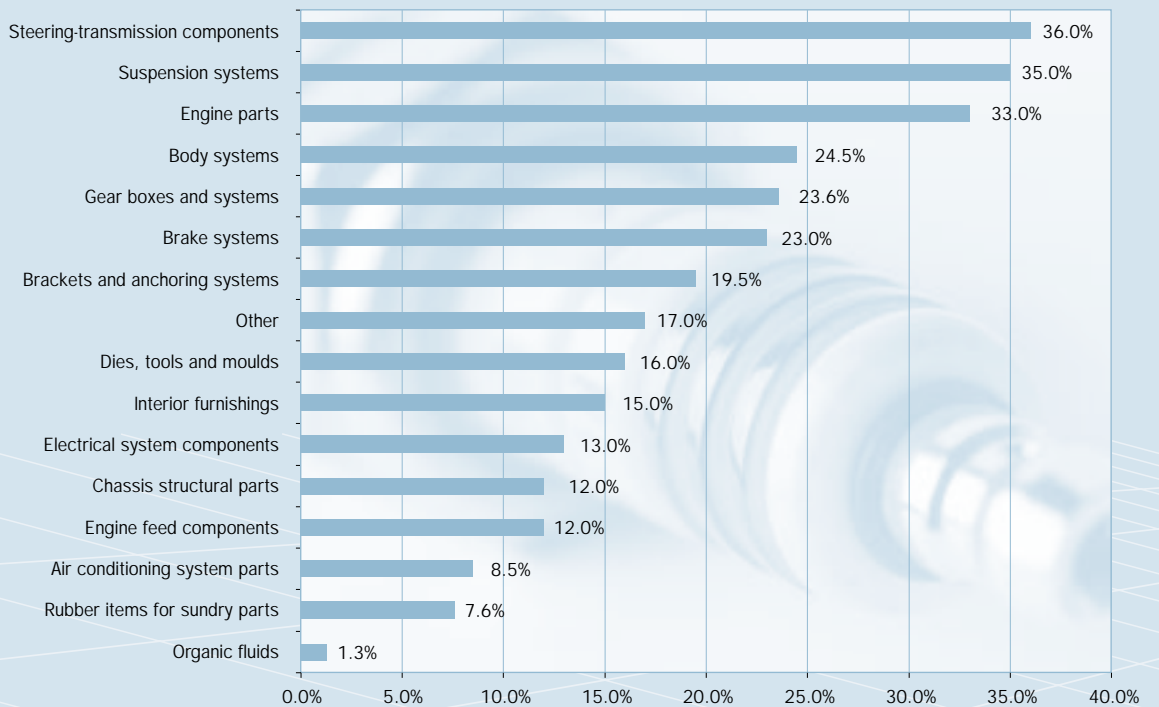

The renowned quality of life in the Basque Country can be attributed to its exceptional landscapes and geographical conditions (shoreline, mountains, climate, etc.) as well as its cultural ambience (international festivals and conferences, film festivals, jazz festivals etc.), its internationally famous museums (Guggenheim Bilbao, Artium, Chillidaleku, etc.) and celebrated cuisine. The pursuit of all kinds of sports has been a popular pastime in Basque society for many years.

▶ The Basque Automotive Suppliers Industry

3.

The automotive suppliers sector is defined as the group of industries engaged in the design, development, production, supply and/or sale of fluids, parts, components, subassemblies, assemblies, systems and modules for the automotive industry. In turn, automotive industry is understood as the group of companies that design and produce industrial vehicles, cars, motorcycles and scooters.

Since the end of the 19th century, the Basque Country has been one of Spain's main industrial centres. It is not surprising therefore that back in the early 1950s, when the automotive industry was beginning to grow, car manufacturers seeking suppliers with good technology should try to get Basque firms to gear their products to this new market.

For this reason, and despite the absence of car manufacturing plants in the region – with the exception of Mercedes Benz in Vitoria (almost 100,000 vehicles in 2004) –, many of the industrial firms present in the Basque Country took heed and focused on that incipient automotive industry.

Thanks to the opening of a Ford plant in Valencia (1976) followed by the General Motors plant in Zaragoza (1982), and to the growth of manufacturers already in Spain, by the early 1990s the Basque automotive industry was able to hold its own in a sector that was far ahead of the others in making globalisation an established fact. The advent of the Single Market thus simply confirmed for all industrial sectors the situation that automotive suppliers in the Basque Country and in the rest of Spain had been experiencing for years.

Activity of Basque Automotive Suppliers

When in early 1990 the Basque Government targeted enhanced competitiveness as a key objective of its Industrial Policy to enable Basque firms to compete successfully in a global market, the Competitiveness Programme identified automotive suppliers as one of the priority sectors of Basque industry. To invigorate the sector and boost the competitiveness of its companies, ACICAE was formed in 1993 as the driving force behind the new Basque Automotive Cluster. Its prime objective is to promote cooperation among cluster firms to enable them to meet the innumerable challenges posed by the market.

In the field of Management Quality, the automotive industry is probably one of the most demanding. By 2004, a full 100% of ACICAE companies held at least ISO certification, while 71% had been certified by the Automotive Industry itself. Moreover, there is growing interest in applying Management Excellence models. Among Basque automotive suppliers, there are many companies that go beyond customer requirements and apply Total Quality and Excellence models such as EFQM¹, with a view to ensuring customer satisfaction and survival, while at the same time satisfying employees and making best use of their resources, all of which will undoubtedly help to raise profits.

Today, the Basque Automotive Suppliers sector comprises 280 companies located in the Basque Country itself, reporting

combined turnover for the year 2004 amounting to €8,117 million, or 250% more than in 1993. The sector employs approximately 44,000 persons and accounted for 15.37% of the Basque GDP in the year 2003, an increase of nearly 5 points over the 1993 figure.

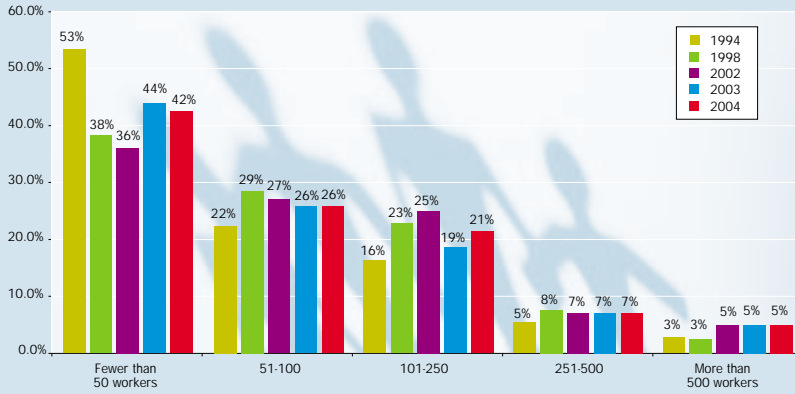

These 280 companies include Tier 1, Tier 2 and Tier 3 suppliers, the largest of which have plants outside the Basque Country, both in Europe and in America. In such a highly competitive sector as the automotive industry, no company, including those in the Basque Country, can afford to be an exception. All must improve continually and with increasing speed. In this regard, Basque automotive suppliers have had a very positive record over the past 10 years, making the outlook for the future appear quite optimistic. Research, Development and Innovation (RD&I) are crucial to the competitiveness of industries. In this area as well, sector companies work hard to keep pace with market requirements, and do so through collaboration with SARETEK², whose specialists enable them to meet requirements in specific technology areas.

Two other challenges being addressed by Basque automotive suppliers are the concentration of decision-making in very few centres for the entire world, and the location of customer production facilities in many different places, trends to which the Basque sector has responded decisively in recent years,

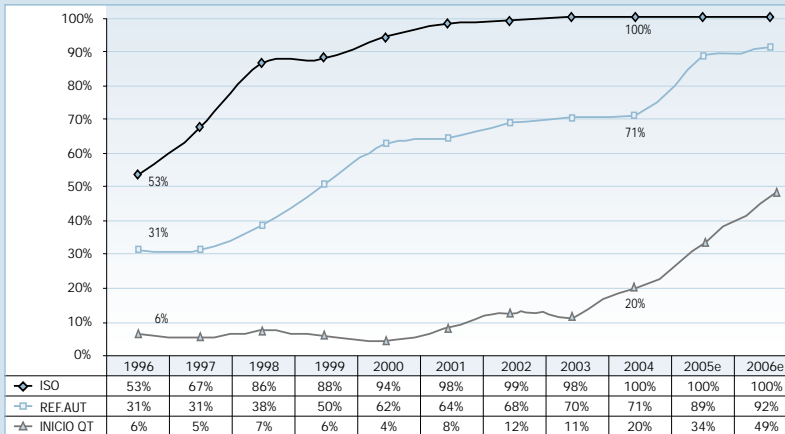

¹ EFQM European Foundation for Quality and Management

² SARETEK Basque Science and Technology Network, in which over 70 centres conduct RD&I activities.

QUALITY IN BASQUE AUTOMOTIVE INDUSTRY COMPANIES

ISO: Companies certified to ISO9000 or other AUTOMOTIVE standard

REF. AUT.: Companies certified to all or some of the following automotive standards: QS9000, VDA EAOF, ISOTS16949

INTRO QT: Companies using Total Quality and/or EFQM Self-assessment methodologies

Source: ACICAE

MARKET CHARACTERISTICS

- **GLOBAL MARKET**
Few decision centers
Customer production plants in various locations
- **CONTINUOUS IMPROVEMENT**
Speedier, more integral improvements in Cost, Quality, Supplies, Development and Management
- **RESEARCH, INNOVATION AND DEVELOPMENT**
Conducted jointly with Customer
- **SHORTER TOTAL PRODUCT DEVELOPMENT TIMES**
Integral Time-to-Market
- **FEWER SUPPLIERS**
In all Customers
Due to new product definitions
Due to smaller suppliers panel

SECTOR TRENDS

- Reduction of decision centres
- Increased purchasing volumes
- Increase in n° of Customer production plants
- Increased size of companies
- Transfer of non-strategic skills
- Reduction of new product launch times
- Sophistication of demand
leisure / comfort / safety
- Incorporation of innovations / new technology:
electronics
communications
materials
- Total cost lowered during product lifetime

COMPETITIVENESS FACTORS

- **RESEARCH, INNOVATION AND DEVELOPMENT CAPACITY**
Good interdisciplinary communication with Customer
Co-engineering from stages prior to product definition
Innovative proposals to Customer
- **INTEGRAL MANAGEMENT CAPACITY**
New responsibilities assumed in all management areas by supplier, under Total Quality concept
- **CAPACITY TO GLOBALISE**
Presence in Customer's locations, assuming associated risks
Propose innovative logistics solutions to Customers
- **TOTAL TIME-TO-MARKET**
Integral Time-to-Market
- **CHAMPION PRICE**

thereby gaining market share despite the drop in prices constantly demanded and achieved by the customer sector.

Rising raw materials and personnel costs combined with price cuts mean that survival must be based on increased competitiveness, which has been achieved by applying new technologies, developing new products, enhancing resource utilisation, raising and improving personnel qualifications, and the constant search for, and presence in, new markets. Under this last heading, Basque automotive suppliers have,

for example, raised exports from 44% in 1994 to 66% in 2004.

Finally, the efforts of the Basque automotive suppliers sector to enhance competitiveness have paid off in increased sales, which rose from a figure of € 2,281 million³ in 1993 to € 7,035 million in 2004. Stated in another way, during that same period world vehicle production increased by 29%, whereas the Basque automotive suppliers sector raised its turnover by nearly 210%.
