**In GenAI, if 2023 was the year of the Story, then 2024 is the year of the Start setting the stage for 2025 being the year of Scale.**

# From FASCINATION to IMPLEMENTATION

## 2023

- **Year of Exploring**
- **Year of LLM**
- **More Disruptions / Shiny Objects**

## 2024

- **Execution & Results**
- **Year of Multi-modal**
- **Public Failures**

# GenAI is growing at a rapid pace

Hype Cycle for Generative AI, 2023

By 2026, **more than 80%** of enterprises will have used **generative AI APIs or models**, and/or deployed GenAI-enabled applications in production environments, **up from less than 5% in 2023**.

Installed base application vendors are racing to embed generative capabilities into their installed base solutions, creating an environment in which **AI will be table stakes**

# Strategic Planning Assumptions (I)

By 2026, over 100 million people will engage robo colleagues (synthetic virtual colleagues) to contribute to enterprise work.

By 2027, nearly 15% of new applications will be automatically generated by AI without a human in the loop, up from zero percent today.

# Strategic Planning Assumptions (II)

By 2027, fewer than 25% of government organizations will have generative-AI-enabled citizen-facing services.

By 2025, the concentration of pretrained AI models among 1% of AI vendors will make responsible AI a societal concern.

# Define Your AI Strategy

### Initiative 04

## Build AI Knowledge and Skills in City Government

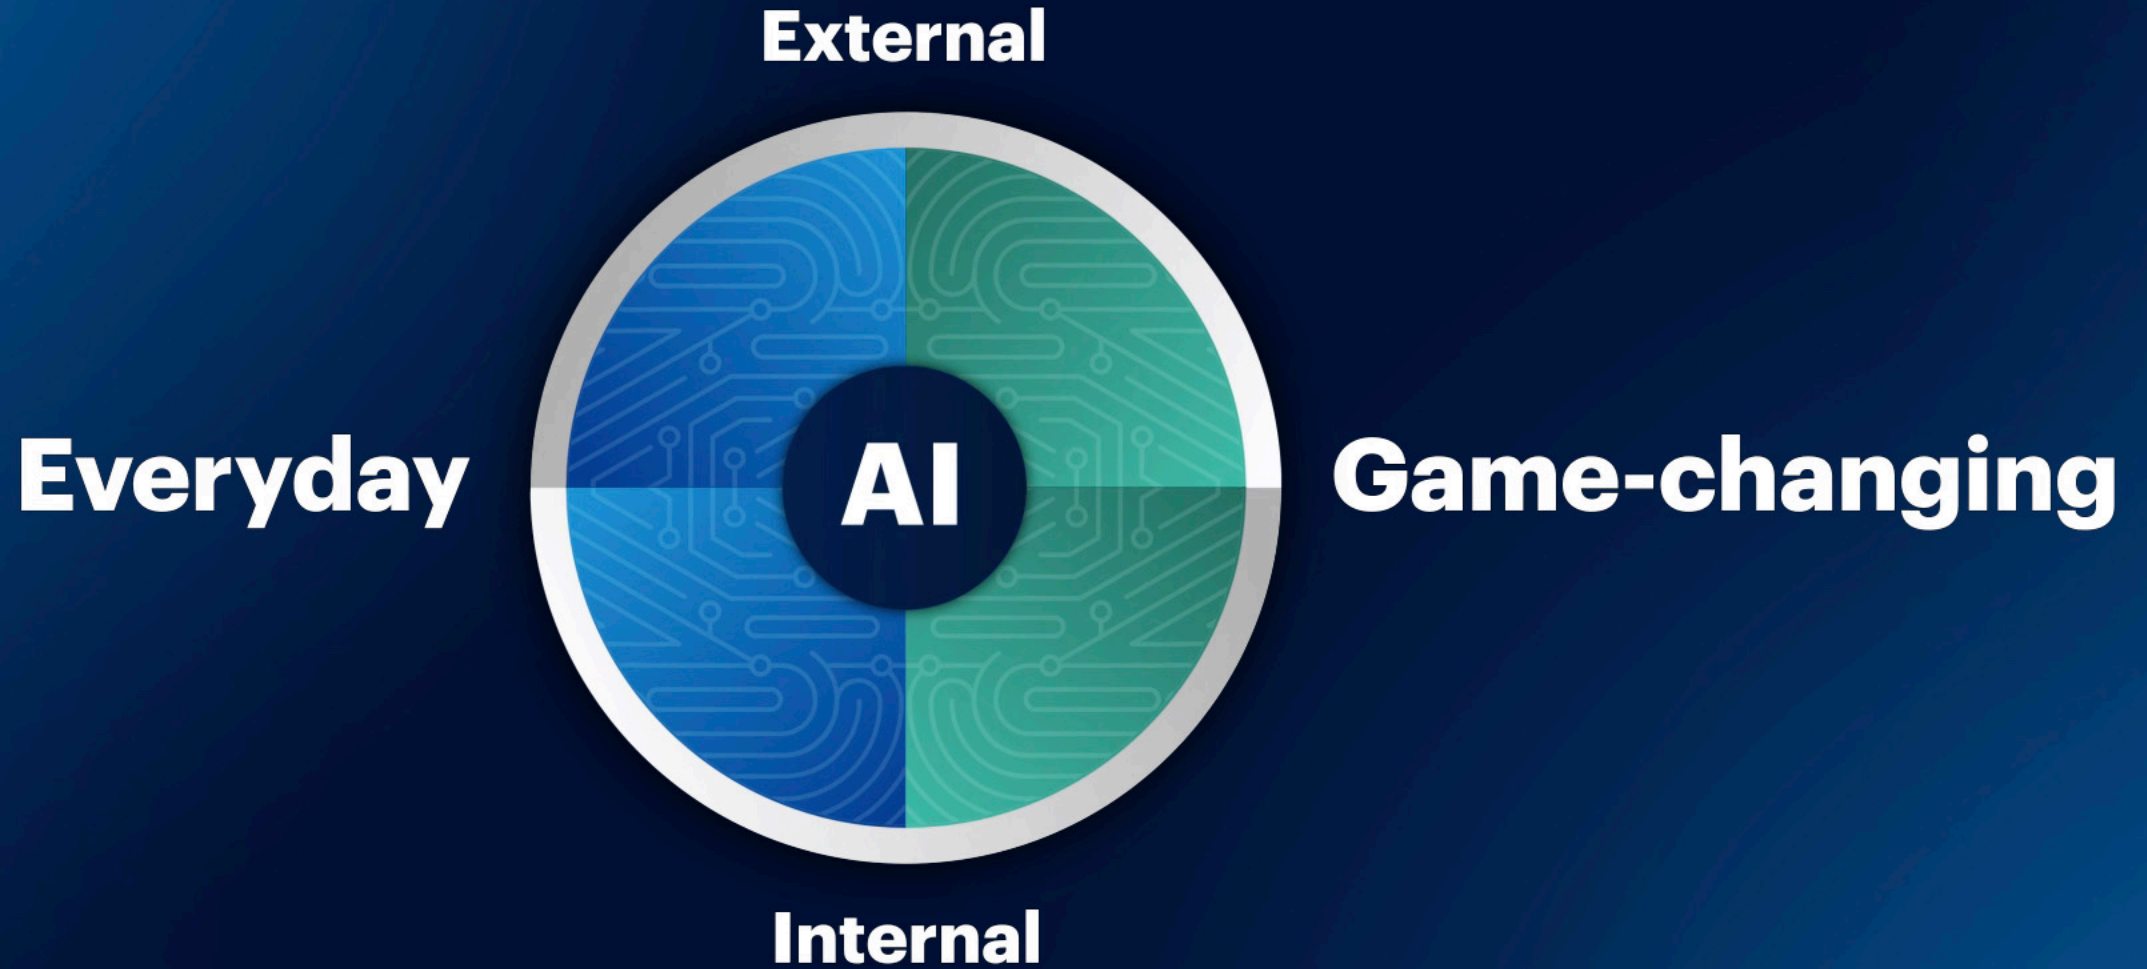

**Objective**

Prepare city personnel to effectively and responsibly work with and on AI, recognizing that AI literacy is critical not just for those in technical roles, but also for the many public servants who use, manage, or make decisions about AI tools.

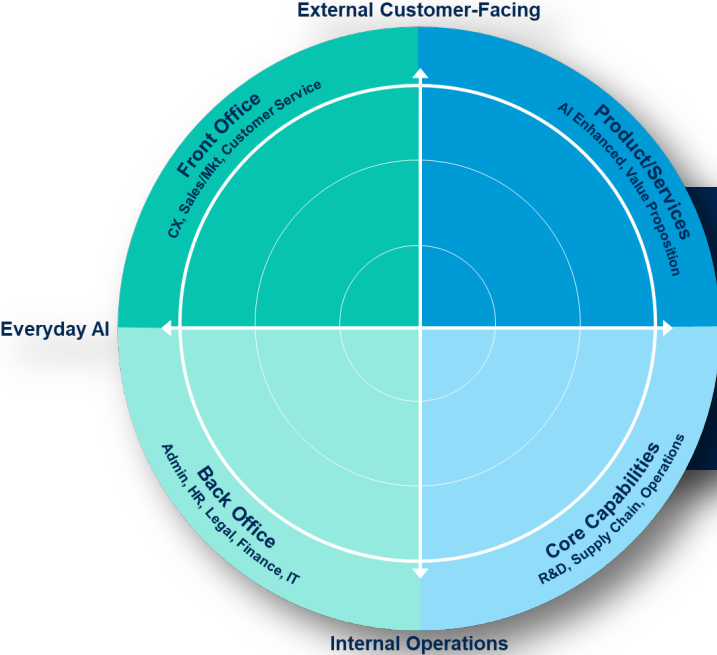

**Target Outcomes**

- City personnel engage with new AI knowledge resources and report that they are obtaining value from them.
- Agencies regularly leverage centralized resources for swift AI information sharing.
- Collaborations across industry, academia, and beyond lead to successful project engagements leveraging partners' expertise to address key challenges the city faces.

AI Opportunity  
Radar

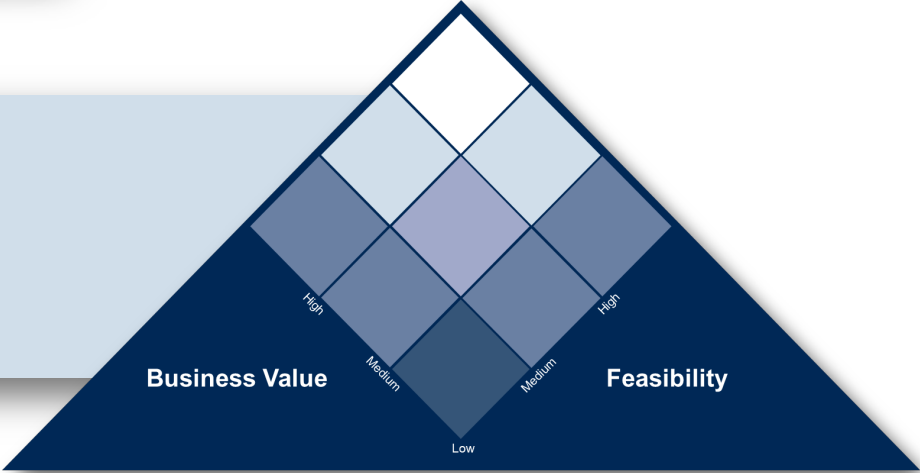

# GET READY | Two Tools for Different Leadership Challenges

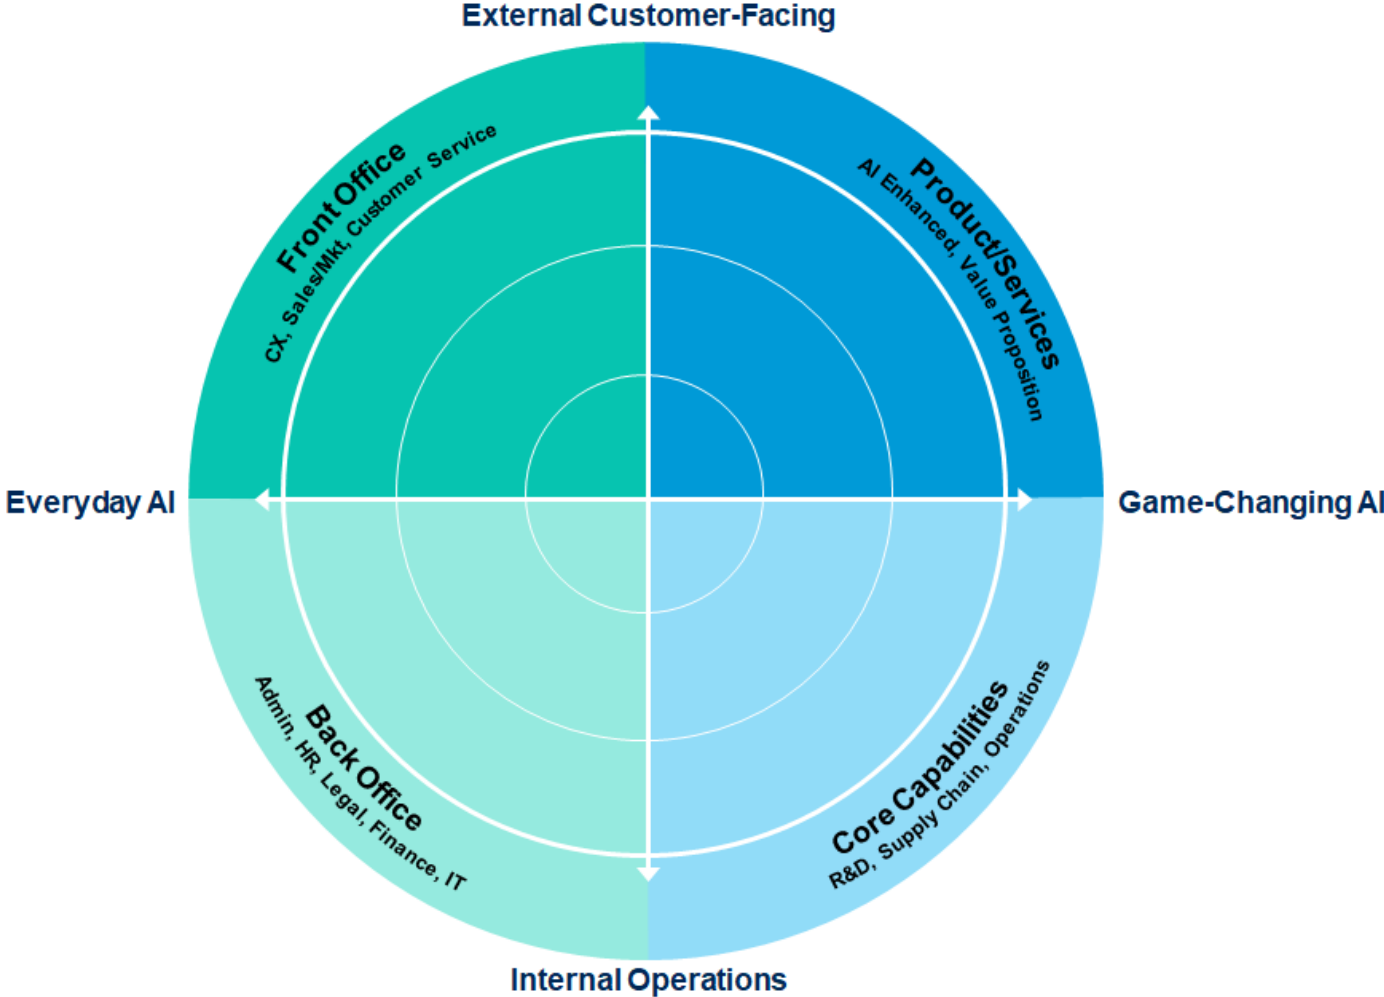

**#1 What's Our Ambition?**  
 We will use the **Gartner Opportunity Radar** to Set the Strategic Direction

**#2 How Should we Prioritize?**  
 We will use the **Gartner Use Case Prism** to Set the Value and Feasibility Prioritization Criteria

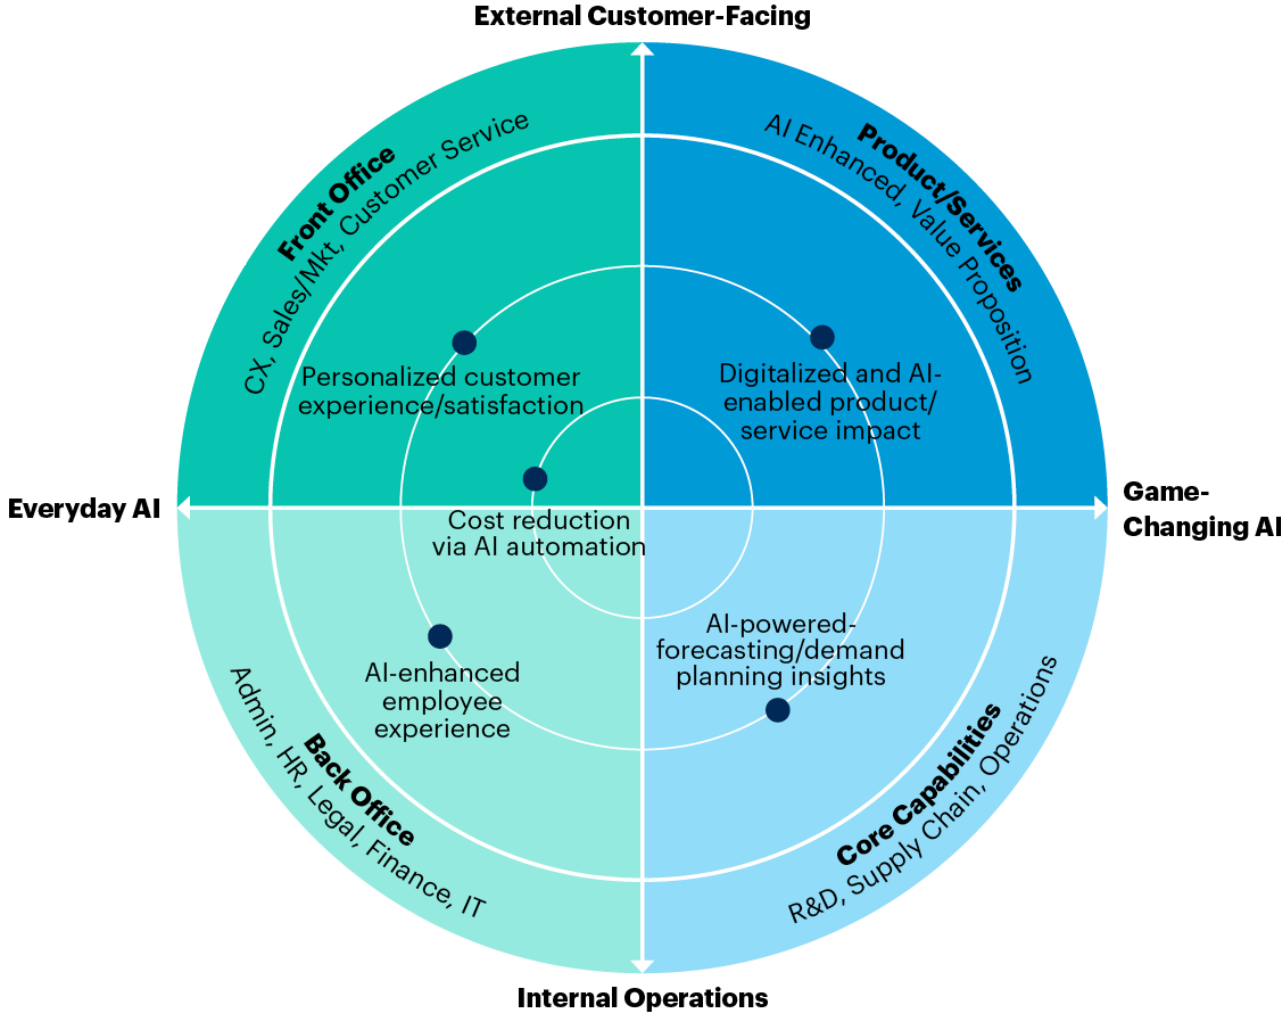

# GET READY | Opportunity Radar to Set the Direction

**Feasibility** is combination of

- Technical Feasibility
- Internal Readiness
- External Readiness

# GET READY | Opportunity Radar to Set the Direction

**Feasibility** is combination of

- Technical Feasibility
- Internal Readiness
- External Readiness

# Government Leaders Are Focusing on Internal v. External Use Cases for GenAI

## Top Internal Use Cases (81%)

### Data Summarization & Insights

Forensic Analysis, Maintenance Evaluation, Natural Disaster Prediction, Crime Pattern Identification, **Legal Document Summarization**, Scientific Journal Analysis

### Process & Workflow Automation

Caseload Tracking & Investigations, Internal Audit, Human Resources (talent intelligence, interview process) **Incident Detection & Response, Legal Processing**

### Workforce Productivity & Enablement

Emergency Response Effectiveness, Sentiment Analysis, **Contact Center Virtual Assistant, Service Desk Chatbot, Knowledge Management, Voice Recognition**

## Top External Use Cases (19%)

### Citizen / Customer Experience

Travel Virtual Assistant, Postal Services, **Citizen Services Chatbot**, Vocational Rehabilitation Assistant, Incident Management Chatbot, **Citizen Help Desk**

### Public Safety, Health & Wellness

Infectious Disease Reporting, Health Services, Anti-Terrorism & Human Trafficking Triangulation

### Content Augmentation & Creation

**Legal Brief Development, Taxpayer Guidelines**, Screening & Legal Documentation, Case Management Collateral

Note: Total Government GenAI use cases n = 329, July 2023 – August 2023. Percentages represent desired use (int. v. ext.) of GenAI use case; classified use cases (n = 12) and those without defined desired use (n = 42) are excluded from percentages; classifications made based on nature of use case. Additional noteworthy internal categories include Code Conversion & Generation (n = 17), and Security & Risk Management (n = 14)

RESTRICTED DISTRIBUTION

# Top GenAI Use Cases Public Sector Executives Are Exploring

Use Case		Description
Case Summarization & Insight		Improve case management support by summarizing unstructured case files data and support a natural language inquiry on the case file to accelerate insights.
Enhanced Citizen Services		Improve the quality and experience of virtual agents through voice or text chatbots available from government portals or through IM platforms offering more conversational explanation of services and processes as well as improving multilingual capabilities.
Interaction Triage		Triage incoming correspondence, submissions or applications from citizens and stakeholders to ensure completeness, initiate follow up or clarification, gain insight into sentiment and appropriately prioritize forward on to be actioned.
Briefing Notes		Generate draft briefing notes for senior management on a particular event or interaction or as a status report incorporating statistics, patterns, sentiments and outliers over time.
Training & Preparedness		Generate draft training plans, scenarios and material that is up to date and based on recent, real-world situations to better support onboarding new staff and retraining existing staff on how to handle common and edge case situations.

## Looking for more use cases?

Gartner is tracking more than 500 GenAI use cases across the enterprise and assessing business impact and feasibility

# GET READY | Prism to Define Prioritization Criteria

**Likely Wins** offer a great combination of high feasibility and high business value.

**Calculated Risks** offer high business value but low feasibility.

**Marginal Gains** are highly feasible but offer low business value.

**Selective Exceptions** offer low business value and low feasibility.

**Prioritize Your Best AI Use Cases With a Gartner Prism**

**Business Value** could be combination of

- Cost Reduction
- Revenue Optimization
- CX Improvements
- Etc.

**Feasibility** could be a combination of

- Technical Feasibility
- Internal Readiness
- External Readiness
- Etc.

# Prioritization of Use Cases is based on business value and feasibility scores and associated risk of each use case

**Business Value Scores are calculated based on 7 dimensions with varying weights**

1. Business Productivity
2. Net New Revenue
3. Customer Satisfaction
4. Competitive Advantage/Avoidance of Disruption
5. Support of a Strategic Goal
6. Enablement of another GenAI Use Case
7. Time to Value

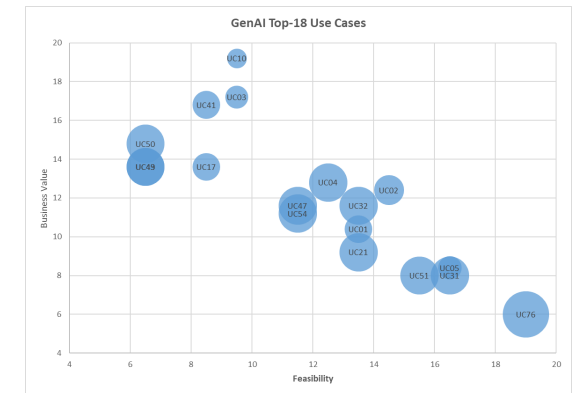

**Feasibility Scores are calculated based on 6 dimensions**

1. Technical Solution Complexity
2. Dependency on another initiative/GenAI Use case
3. Data Availability/Quality
4. Business & Technical Skills availability
5. Level of Change Management Required
6. Organizational Readiness

**Risk of each use case is estimated using the Gartner risk assessment matrix**

1. How high is the inherent risk? (High risk regarding ethics, legal/regulatory/data sensitiveness, technical, and intellectual property, impact of wrong results...)
2. How wide is the risk exposure?

**Use Cases are placed on the x – y axes based on scores. Bubble size: Risk**

1

**Business Value Scores**

2

**Feasibility Scores**

3

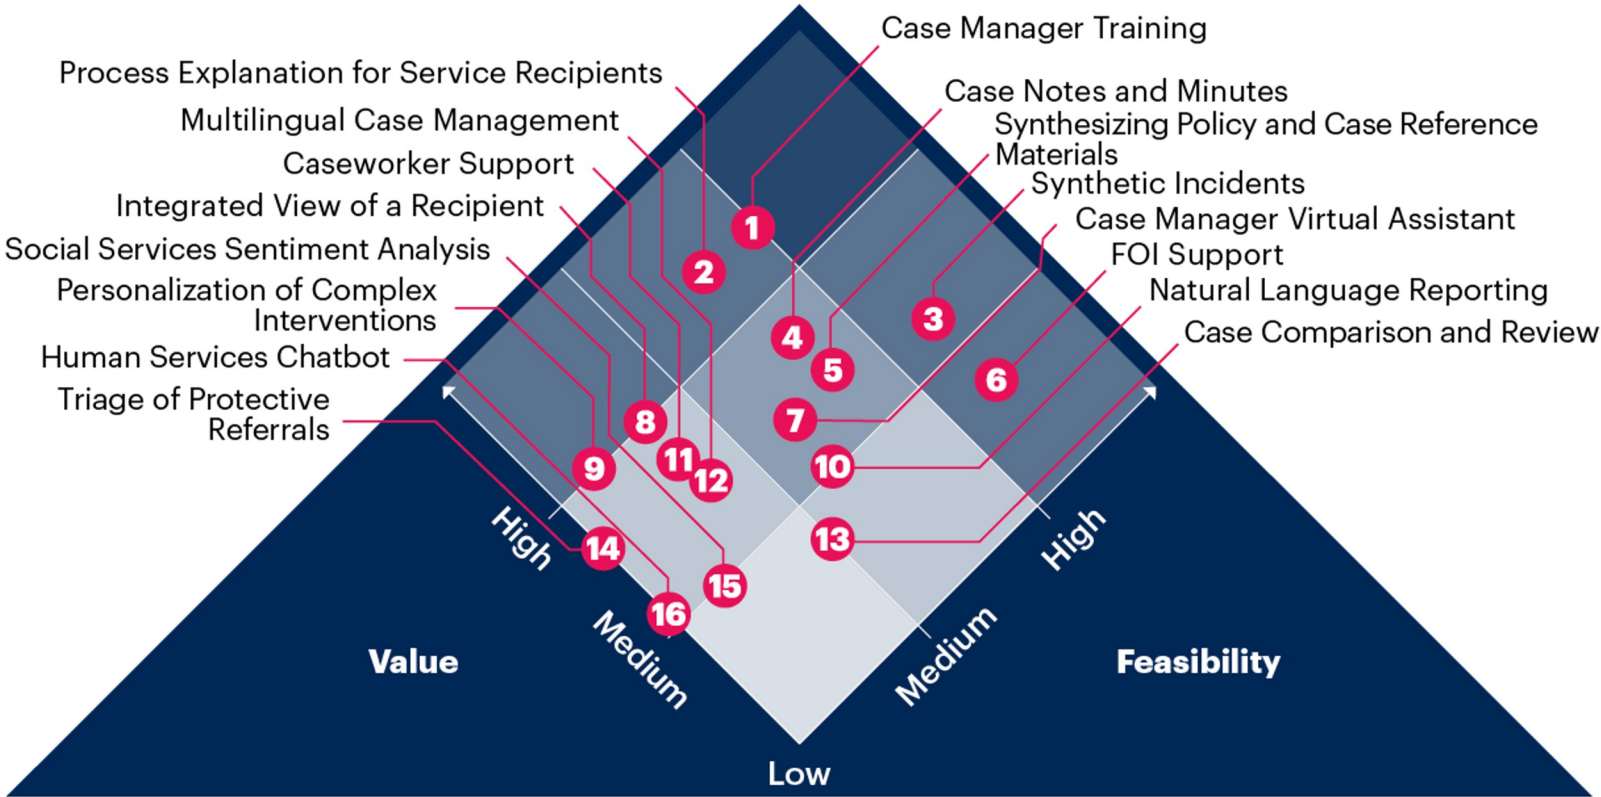

**Risk Assessment**

4

**Placement on the Prioritization Plane**

WORLD  
ECONOMIC  
FORUM

**Jobs of Tomorrow:**  
Large Language  
Models and Jobs

WHITE PAPER

SEPTEMBER 2023

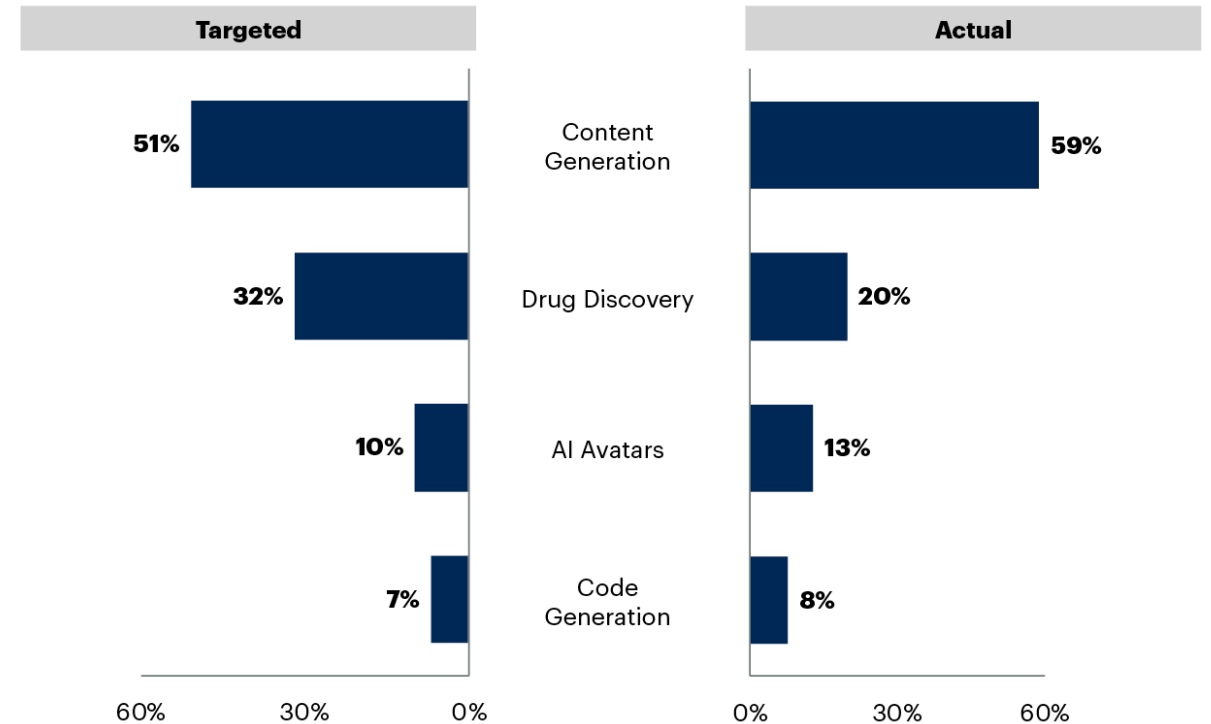

# A 3% increase in productivity over the next decade\*?

- Generative AI (GenAI) will boost labor productivity, potentially amplifying global GDP while exacerbating economic inequality.
- GenAI will revolutionize business models by introducing machine customers, revealing ways to break financial constraints and enhancing economic forecasting via large language models (LLMs).
- GenAI will increase opportunities to improve customer experience through greater personalization based on more transparency of personas and segments.

Top Use Cases for Generative AI

RESTRICTED DISTRIBUTION

# The most advantaged, the "worst" (among the "best")?

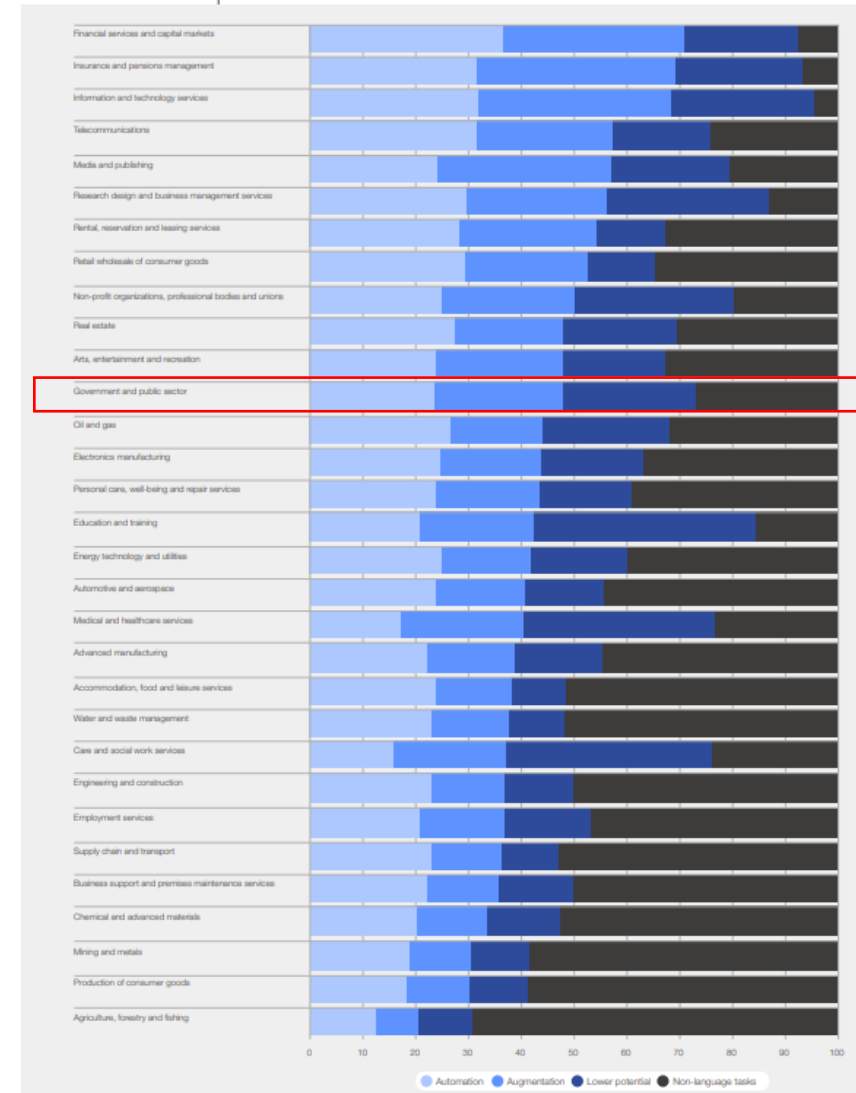

- “Employees right across the skills distribution benefited, but in a pattern now common in generative AI studies, the biggest performance gains came among the less highly skilled in their workforce. This makes intuitive sense: large language models are best understood as excellent regurgitators and summarisers of existing, public-domain human knowledge. The closer one’s own knowledge already is to that limit, the smaller the benefit from using them.”

<https://www.ft.com/content/b2928076-5c52-43e9-8872-08fda2aa2fcf>

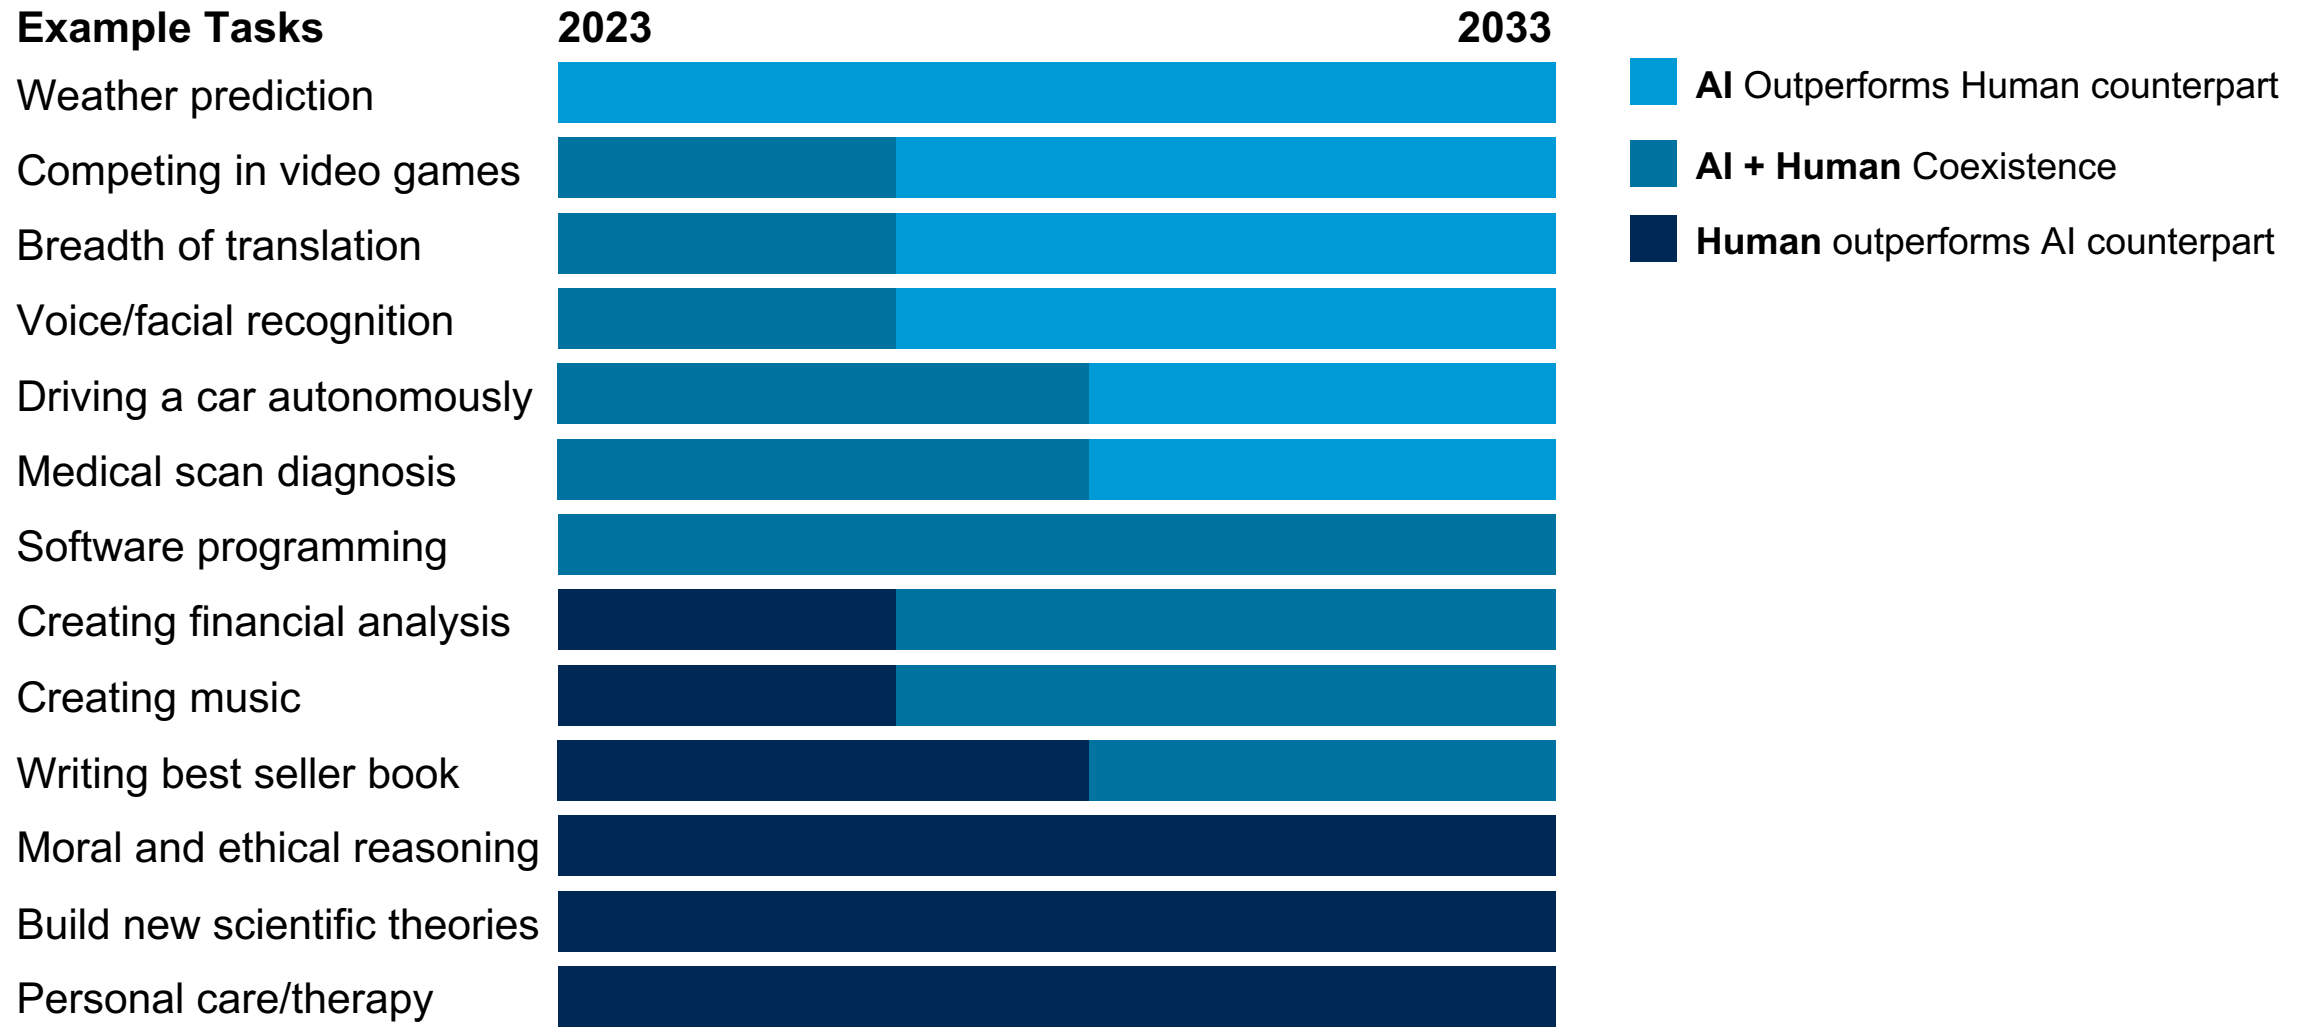

# A task-based approach to job exposure\*

- “The report found that the number one task predicted to be automated now and in the next five years is information and data processing. The present task-based analysis also indicates that this task has high potential for automation (...). Similarly (...) the lowest potential for automation will be in reasoning and decision-making tasks. (...) This paper’s task-based analysis denotes decision-making tasks as having high potential for augmentation (especially for evaluating personal capabilities or performance, reading documents or materials to inform work processes, and evaluating patient or client condition or treatment options).”

# Generative AI Technology Landscape

**The GenAI technology landscape is rapidly evolving, creating a new ecosystem of vendors and products that technology innovation leaders find difficult to navigate.**

# How to confidently move forward...

1

## Establish North Star

Drive insight into GAI for internal, productivity-enhancing and external, business growth use cases. The resulting short list should drive selection of a set of Proof-of-Concept candidates and a Proof-of-Concept plan that will be further developed and executed in the coming months.

2

## Governance / COE Foundations

Establish the governance, policy, and skill foundations required for sustained success. Define policies of use – internally and externally. Define governance across business, IT, and ethics/IP/legal dimensions.

3

## Technology / Data Foundations

Establish the technology (and vendor) foundations required to support your initial efforts – from LLM approach to data prepare and vendor options to ensure the right foundation is in place. Includes Cybersecurity dimension.

4

## Copilot Readiness & Acceleration Plan

Get the enterprise ready for augmented ways of working across corporate functions and LOBs. Identifies target roles and processes to adopt, how work will change, and the metrics that will measure impact.

5

## Use Case Proof-of-Concept Design & Plan

Select POC candidates. Quantify value. Define data and architectural patterns. Identify short-list of LLM vendors (as req'd). Develop POC plan, establish teams, and ready environments for execution.

6

## Use Case Proof-of-Concept Execution

Launch the POC efforts drive insight from a test-and-learn series of sprints. Develop and test the POCs. Measure and track results. Capture findings and make go-forward recommendations and scaling plan.

7

## Continually Sense, Adapt, Respond

Develop a continuous sense-and-respond listening function that keeps you ahead on AI/GAI developments and the implications of market, technology, and competitor moves on your specific lines of business.

# Prompt Engineering | Hey Robo, Help Me to Fine Tune Use Case

## NOT-SO-BAD PROMPT

Can you help me now to fine tune the following use case:

“Automating routine accounting tasks, such as invoice processing and reconciliation”

## EVEN BETTER PROMPT

Can you help me now to fine tune the following use case:

“Automating routine accounting tasks, such as invoice processing and reconciliation”

**Please help me to develop a detailed implementation plan**

## NEXT LEVEL PROMPT

Can you help me now to fine tune the following use case:

“Automating routine accounting tasks, such as invoice processing and reconciliation”

**Please help me to:**

- 1. Define the specific inputs and outputs of a generative AI model**
- 2. Gather and prepare the training data required for the model**
- 3. Select the right generative AI algorithm and hyperparameters**
- 4. Develop a plan for evaluating the performance of the model**

**Hey Robo, Help Me to Fine Tune a Specific Use Case** and develop for example a detailed implementation plan for it.

# Balancing AI Energy and Emissions Impacts

By 2030, AI has the potential to reduce global CO<sub>2</sub>e emissions by **5% to 15%**.

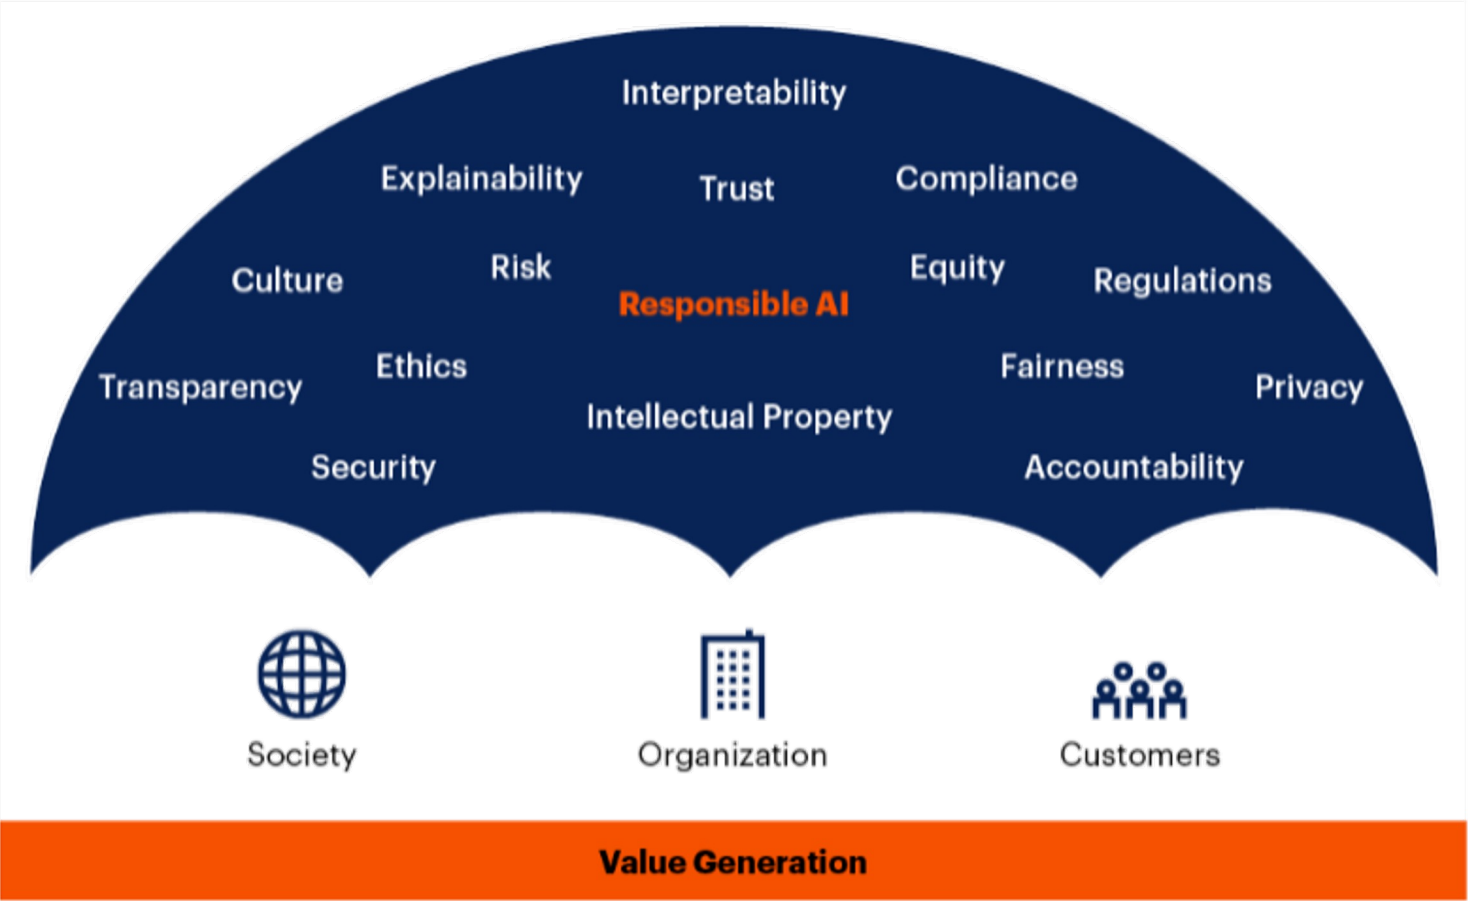

By 2030, AI may consume up to **3.5%** of the world's electricity.

## Actions for Executive Leaders

- Understand AI's end-to-end, environmental, social and economic breakeven point where positive impacts exceed the negative.
- Assess application of AI technology for unintended consequences.

# Responsible AI & The Human Factor

# Recommendations GenAI

## Recognize that this is a very early stage and a hyped technology

- But the **potential is significant**, so proceed but don't over pivot
- Encourage “**out-of-the-box**” thinking about work processes

## Define governance guidelines and pilots

- Ensure **all users understand** the risks, issues and practices
- Encourage **experimentation and pilots**
- Keep “**Human in the Loop**” to review **output**

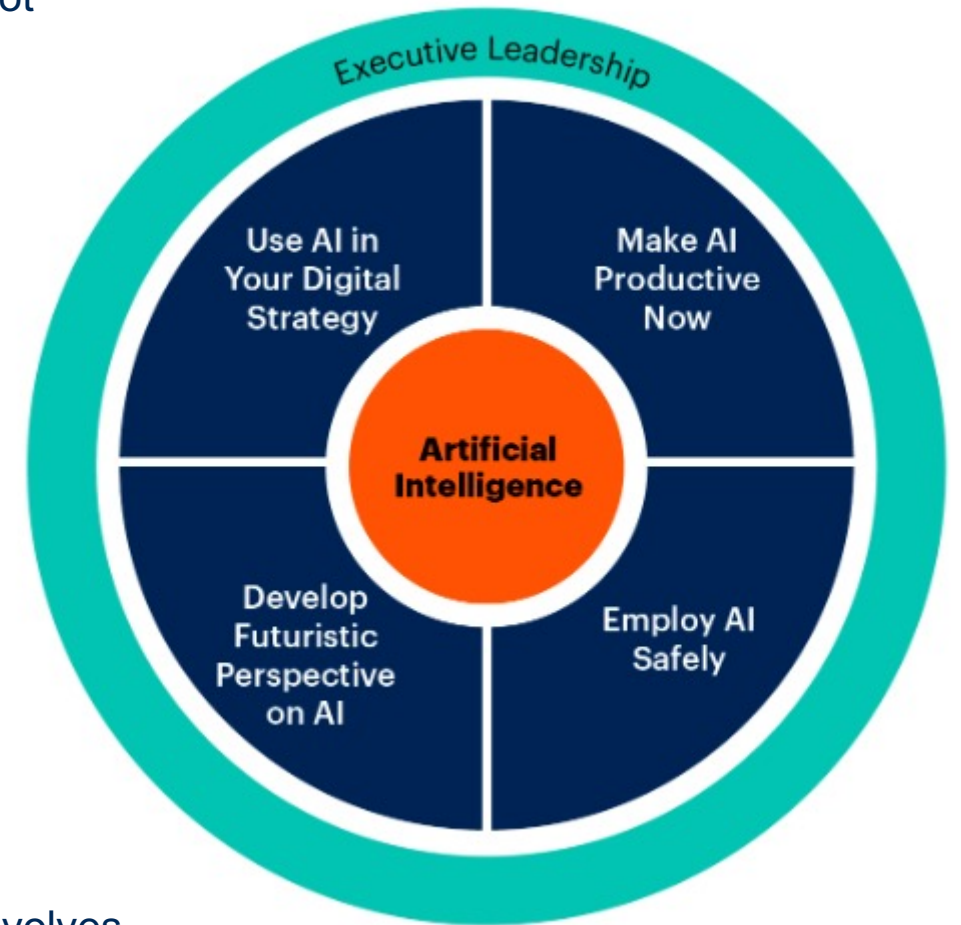

## Develop a task force reporting to the CIO and CEO

- Identify existential **threats** posed and major **opportunities**
- Management needs to know in order to plan

## Plan roadmap and discovery map and monitor

- **Skills, services, operationalization, investments** needed
- Address strategic opportunities and threats
- **Monitor** and follow the **market and technology** as it rapidly evolves

# SUSTAINABLE

AI + EI

**Eskerrik Asko!**  
**Muchas gracias**
